

# AUTHENTICATION PROJECT

## **About:**

I have created a authentication project in which an authenticate user can login and logout .

I have used MYSQL database for store user information.

## **Tools Used:**

Gradle build 6.5 : For compile java files.

## **Requirement:**

Java version : java 14.0.2 or above

Tomcat webserver

Chrome Browser

## **Process :**

Place file at c:\tomcat9\....

For Run server : C:\tomcat9\bin>startup

On Browser: <http://localhost:8080/stylefour>

Username : admin

Password : admin

My SQL database : jdbc:mysql://localhost:3306/tmdb,"tmdbuser","tmdbuser"

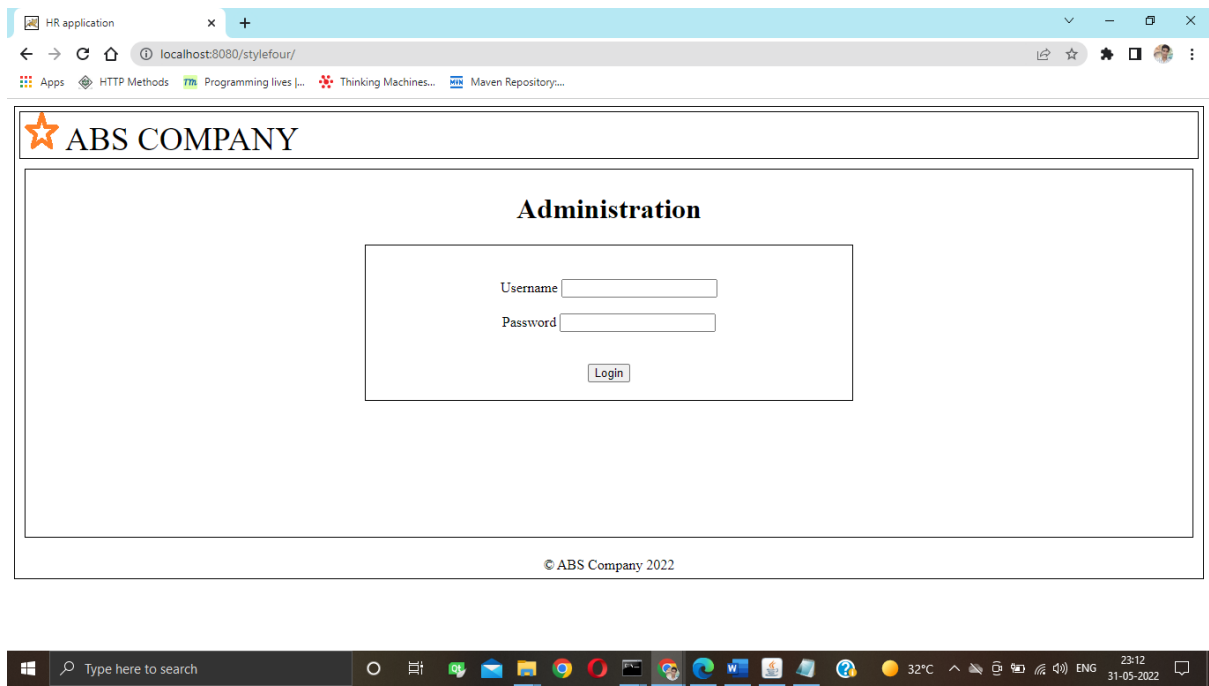

Database Name : tmdb

User name: tmdbuser

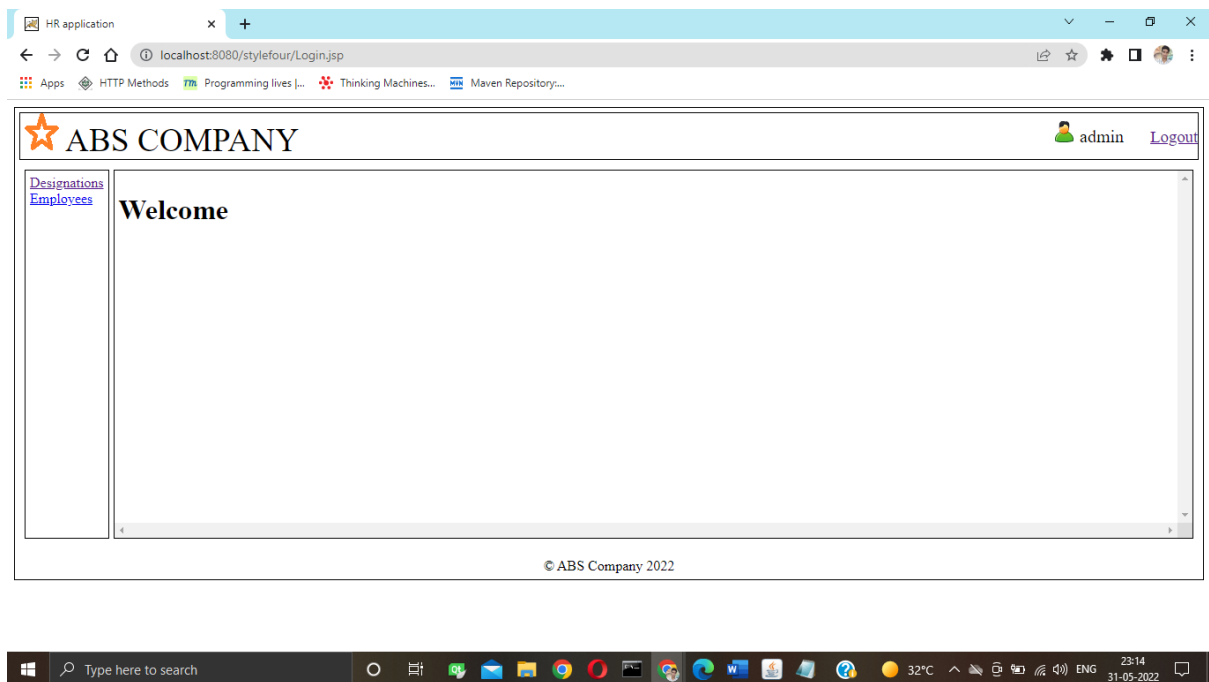

Password : tmdbuser

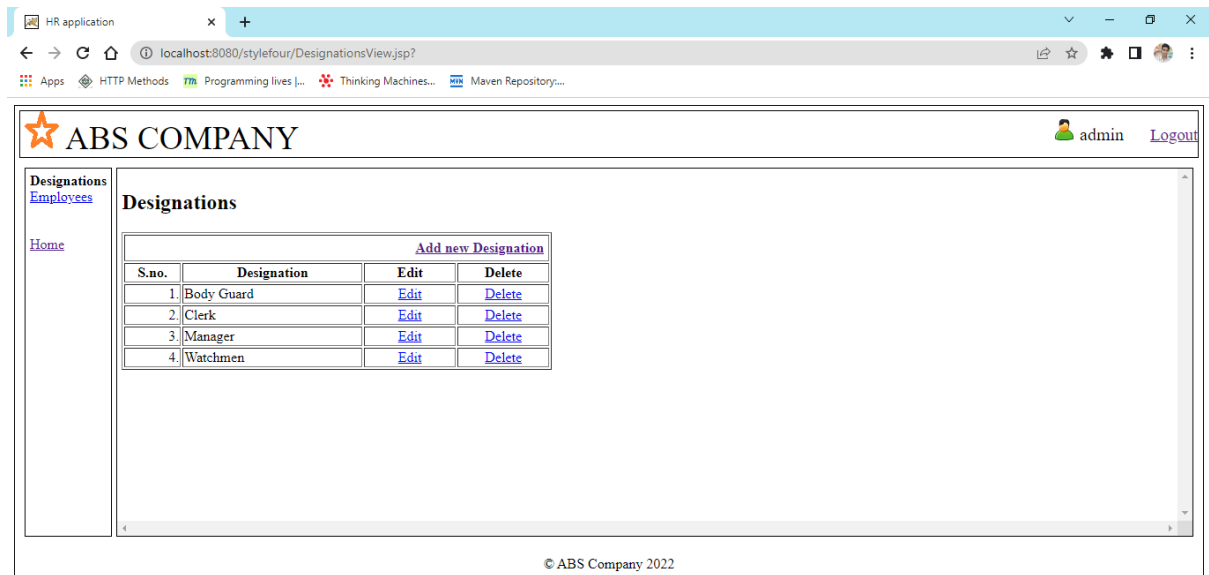

## Output:

If user enter correct username and password then he can login into the application.

After Login :

# User can be logout by click logout button.

# User can easily perform CRUD operation (Create, Read , Update , Delete)

# All data are stored at MYSQL database.
